

E-Z FUNNEL JR. FOR RIDING LAWN MOWERS**ABSTRACT**

A funnel (1) designed for providing accommodations for the consumer. By drilling a hole (3) through the center of the gas cap (2) the funnel can be inserted into the gas cap. The two pieces can now be put together and attached permanently with epoxy glue that is nonsoluble. A user of this funnel can now screw it onto the gas tank of their riding lawn mower and with it's special feature, the gas goes right into the tank. Their hands are free to hold the container they are using to carry the gas in.
